

IRONWOOD STATE PRISON

MEDICAL INSPECTION RESULTS

BUREAU OF AUDITS AND INVESTIGATIONS

OFFICE OF THE
INSPECTOR GENERAL

DAVID R. SHAW
INSPECTOR GENERAL

STATE OF CALIFORNIA

June 2010

June 17, 2010

J. Clark Kelso, Receiver
California Prison Health Care Receivership Corporation
501 J Street, Suite 100
Sacramento, California 95814

Dear Mr. Kelso:

Enclosed is the Office of the Inspector General's final report on its inspection of medical care delivery at Ironwood State Prison. The purpose of our inspection was to evaluate and monitor the progress of medical care delivery to inmates at the institution.

The report finds that based on our weighted scoring system encompassing 18 components, Ironwood State Prison received 68.3 percent of the total weighted points possible. The report contains a detailed breakdown of the institution's score in each of the 18 relevant components, including the results of all 139 questions. A copy of the report can also be found on our website at www.oig.ca.gov.

Thank you for the courtesy and cooperation extended to my staff during the inspection. Please call Nancy Faszer, Deputy Inspector General, In-Charge, at (916) 830-3600 if you have any questions.

Sincerely,

A handwritten signature in blue ink, reading "David R. Shaw".

David R. Shaw
Inspector General

Enclosure

Executive Summary

An April 2001 class action lawsuit filed by inmates represented by the Prison Law Office alleged that the state provided constitutionally inadequate medical care at California state prisons in violation of inmates' constitutional rights. And, in October 2005, the U.S. Northern District Court of California declared that California's delivery system for prison medical care was "broken beyond repair" and still not meeting constitutional standards. As a result, the federal court imposed a receivership to raise the delivery of medical care to constitutional standards. To evaluate and monitor the progress of medical care delivery to inmates, the receiver requested, and the Office of the Inspector General (OIG) agreed, to establish an objective, clinically appropriate, and metric-oriented medical program to annually inspect the delivery of medical care at each state prison.

**Overall
Score
68.3%**

In February 2010, we inspected Ironwood State Prison (ISP). Our medical inspection encompassed 18 components of medical delivery and comprised 139 questions. The questions are weighted based on their importance to the delivery of medical care to inmates. ISP received 68.3 percent of the total weighted points possible.

The following summary table lists the components we inspected in order of importance (highest to lowest), with the institution's score and the definitions of each inspection component. The detailed medical inspection results, with the questions for each component, begin on page 7 of this report. While we are committed to helping each institution achieve a higher level of medical care, it is not our intent to determine the percentage score needed by an institution to meet constitutional standards—that is a legal matter for the federal court to determine.

Executive Summary Table

Component	Weighted Score	Definition
<i>Chronic Care</i>	38.7%	Examines how well the prison provided care and medication to inmates with specific chronic care conditions, which are those that affect (or have the potential to affect) an inmate's functioning and long-term prognosis for more than six months. Our inspection tests anticoagulation therapy and the following chronic care conditions: asthma, diabetes, HIV (Human Immunodeficiency Virus), and hypertension.
<i>Clinical Services</i>	60.8%	Evaluates the inmate's access to primary health care services and focuses on inmates who recently received services from any of the prison's facility or administrative segregation unit clinics. This component evaluates sick call processes (doctor or nurse line), medication management, and nursing.
<i>Health Screening</i>	82.3%	Focuses on the prison's process for screening new inmates upon arrival to the institution for health care conditions that require treatment and monitoring, as well as ensuring inmates' continuity of care.
<i>Specialty Services</i>	82.4%	Focuses on the prison's process for approving, denying, and scheduling services that are outside the specialties of the prison's medical staff. Common examples of these services include physical therapy, oncology services, podiatry consultations, and neurology services.
<i>Urgent Services</i>	70.2%	Addresses the care provided by the institution to inmates before and after they were sent to a community hospital.
<i>Emergency Services</i>	73.2%	Examines how well the prison responded to medical emergencies. Specifically, we focused on "man down" or "woman down" situations. Further, questions determine the adequacy of medical and staff response to a "man down" or "woman down" emergency drill.

Component	Weighted Score	Definition
<i>Prenatal Care/Childbirth/Post-delivery</i>	N/A	Focuses on the prenatal and post-delivery medical care provided to pregnant inmates. Not applicable at men's institutions.
<i>Diagnostic Services</i>	57.5%	Addresses the timeliness of radiology (x-ray) and laboratory services and whether the prison followed up on clinically significant results.
<i>Access to Health Care Information</i>	49.0%	Addresses the prison's effectiveness in filing, storing, and retrieving medical records and medical-related information.
<i>Outpatient Housing Unit</i>	89.8%	Determines whether the prison followed department policies and procedures when placing inmates in the outpatient housing unit. This component also evaluates whether the placement provided the inmate with adequate care and whether the physician's plan addressed the placement diagnosis.
<i>Internal Reviews</i>	87.5%	Focuses on the frequency of meetings held by the prison's Quality Management Committee (QMC) and Emergency Medical Response Review Committee (EMRRC) and whether key staff attended the meetings, the number of medical appeals filed, and the prison's death review process.
<i>Inmate Transfers</i>	95.3%	Focuses on inmates pending transfer to determine whether the sending institution documented medication and medical conditions to assist the receiving institution in providing continuity of care.
<i>Clinic Operations</i>	97.0%	Addresses the general operational aspects of the prison's facility clinics. Generally, the questions in this component relate to the overall cleanliness of the clinics, privacy afforded to inmates during nonemergency visits, use of priority ducats (slip of paper the inmate carries for scheduled medical appointments), and availability of health care request forms.
<i>Preventive Services</i>	33.7%	Focuses on inmate cancer screening, tuberculosis evaluation, and influenza immunizations.
<i>Pharmacy Services</i>	82.8%	Addresses whether the prison's pharmacy complies with various operational policies, such as conducting periodic inventory counts, maintaining the currency of medications in its crash carts and after-hours medication supplies, and having valid permits. In addition, this component also addresses whether the pharmacy has an effective process for screening medication orders for potential adverse reactions/interactions.
<i>Other Services</i>	85.0%	Examines additional areas that are not captured in the other components. The areas evaluated in this component include the prison's provision of therapeutic diets, its handling of inmates who display poor hygiene, and the availability of the current version of the department's Inmate Medical Services Policies and Procedures.
<i>Inmate Hunger Strikes</i>	N/A	Examines medical staff's monitoring of inmates participating in hunger strikes. ISP did not have any inmates on a hunger strike for at least three days over the past year. Because our sample criteria was not met, we did not test this program.
<i>Chemical Agent Contraindications</i>	100.0%	Addresses the prison's process of handling inmates who may be predisposed to an adverse outcome from calculated uses of force (cell extractions) involving Oleoresin Capsicum (OC), which is commonly referred to as "pepper spray." For example, this might occur if the inmate has asthma.
<i>Staffing Levels and Training</i>	100.0%	Examines the prison's medical staffing levels and training provided.
<i>Nursing Policy</i>	50.0%	Determines whether the prison maintains written policies and procedures for the safe and effective provision of quality nursing care. The questions in this component also determine whether nursing staff review their duty statements and whether supervisors periodically review the work of nurses to ensure they properly follow established nursing protocols.
Overall Score	68.3%	

Introduction

Under the authority of California Penal Code section 6126, which assigns the Office of the Inspector General (OIG) responsibility for oversight of the California Department of Corrections and Rehabilitation, and at the request of the federal receiver, the OIG developed a comprehensive inspection program to evaluate the delivery of medical care at each of the California Department of Corrections and Rehabilitation's 33 adult prisons.

In February 2010, we inspected Ironwood State Prison (ISP). Our medical inspection encompassed 18 components of medical delivery and comprised 139 questions. To help readers understand the medical risk associated with certain components of medical delivery—which pose a greater risk to an inmate-patient—we developed a weighting system and assigned points to each question. Consequently, we assigned more total points to more critical components, such as chronic care, clinical services, and health screening. We assigned fewer total points to less critical components, such as inmate hunger strikes, staffing levels and training, and chemical agent contraindications. (For a detailed description of the weighting system, see Objectives, Scope, and Methodology on the next page.)

Background

In April 2001, inmates represented by the Prison Law Office filed a class action lawsuit, known as *Plata v. Schwarzenegger*. The lawsuit alleged that the state provided constitutionally inadequate medical care at California state prisons in violation of inmates' constitutional rights. In June 2002, the parties entered into a Stipulation for Injunctive Relief, and the state agreed to implement over several years comprehensive new medical care policies and procedures at all institutions.

Nevertheless, the U.S. Northern District Court of California declared in October 2005 that California's delivery system for prison medical care was "broken beyond repair" and still not meeting constitutional standards. Thus, the federal court imposed a receivership to raise the delivery of medical care to constitutional standards. In essence, the court ordered the receiver to manage the state's delivery of medical care and restructure day-to-day operations to develop and sustain a system that provides constitutionally adequate medical care to inmates. The court stated that it would remove the receiver and return control to the state once the system is stable and provides for constitutionally adequate medical care.

To evaluate and monitor the progress of medical care delivery to inmates, the receiver requested that the OIG establish an objective, clinically appropriate, and metric-oriented medical inspection program. Toward that end, the Inspector General agreed to inspect each state prison annually. We are committed to helping each institution achieve a higher level of medical care, but it is up to the federal court to determine the percentage score necessary for an institution to meet constitutional standards.

About the Institution

The primary mission of Ironwood State Prison (ISP) is to improve public safety through the confinement of minimum and medium-security male offenders, while providing them the life improvement skills needed to successfully re-integrate back into society upon parole. ISP was activated February 1, 1994 and is comprised of four semi-autonomous Level III facilities and an outside Level I facility. As of May 26, 2010, the California Department of Corrections and Rehabilitation reported that ISP had custody over 4,060 male inmates, of which 3,818 are Level III inmates. ISP operates six medical clinics where staff handle non-urgent requests for medical services. ISP also treats inmates needing urgent or emergency care in its triage and treatment area (TTA). According to information provided by the institution, ISP's vacancy rate among licensed medical managers, primary care providers, supervisors, and rank and file nurses is 9.5 percent.

John W. Culton, M.D., M.P.H., serves as the prison's health care manager and chief medical officer.

Objectives, Scope, and Methodology

In designing the medical inspection program, we reviewed the California Department of Corrections and Rehabilitation's policies and procedures, relevant court orders, guidelines developed by the department's Quality Medical Assurance Team, and guidance developed by the American Correctional Association. We also reviewed professional literature on correctional medical care, consulted with clinical experts, and met with stakeholders from the court, the receiver's office, the department, and the Prison Law Office to discuss the nature and scope of the inspection program. Based on input from these stakeholders, we developed a medical inspection program that evaluates medical care delivery. Within each of 20 components, we created "yes" or "no" questions designed to gauge performance.

To make the inspection results meaningful to both a medical expert and a lay reader, we worked with clinical experts to create a weighting system that factors the relative importance of each component compared to other components. Further, the program considers the relative importance of each question within a component to the other questions in that component. This weighting ensures that more critical components—such as those that pose the greatest medical risk to the inmate-patient—are given more weight compared to those considered less serious. For example, we assign a high number of possible points to the chronic care component because we consider this the most serious of all the components. We assign proportionately fewer points to all other components.

Each inspection question is weighted and scored. The score is derived from the percentage of "yes" answers for each question from all items sampled. We then multiply the percentage of "yes" answers within a given question by the question's weight to arrive at a score. The following example shows how this scoring system works.

<i>Example Question: Institution X</i>									
	<i>Answers</i>				<i>Weighting Points</i>				
	<i>Yes</i>	<i>No</i>	<i>Yes + No</i>	<i>Yes %</i>	<i>Possible</i>	<i>Received</i>	<i>Score %</i>	<i>N/A</i>	<i>Unk</i>
Is the clinical history adequate?	40	10	50	80%	20	16	80.0%	0	0

If the institution receives 40 “yes” answers and 10 “no” answers, the percentage of “yes” answers to this question equals 80 percent. We calculate the number of points the institution would receive by multiplying the “yes” percent of 80 by the number of possible points for this question, which is 20, to arrive at 16 points.

To arrive at the total score, we add the points received for each question and then for each program component. Finally, we calculate the institution’s overall score by dividing the sum of the points received by the sum of the points possible. We do not include in the institution’s overall score the weight for questions that are not applicable or, in some cases, where a lack of documentation would result in numerous “no” answers for one deviation from policy (unknown). For instance, an institution may not be able to provide documentation that its Emergency Medical Response Review Committee met for a particular month. Therefore, when we evaluate whether meeting minutes document monthly meetings for a particular month, the institution would receive a “no” answer for that question. However, when we evaluate whether the meeting minutes document the warden’s attendance at the meeting, the answer would be “unknown” so that the institution’s score is not penalized twice for the same reason, not documenting the meeting.

To evaluate the institution’s delivery of medical care, we obtained various electronic data files maintained by the institution for inmate medical scheduling and tracking, pharmacy, and census data. We used these electronic data files only to identify random samples of inmates receiving or requiring specific medical services. We then reviewed the medical file for each inmate in our sample. We did not rely on the medical care information contained in these electronic data files.

Our inspection program assumes that if a prison's medical staff does not document an event in an inmate's unit health record, the event in question did not happen. If an inmate's record does not show that the inmate received his medications on a specified date, for example, we assume that the inmate did not receive the medications. While it is possible that the inmate received his medications and the staff neglected to document the event, our program cannot assume that appropriate care was provided.

Our medical inspection at ISP encompassed 18 of the 20 components of medical delivery. Two of the components were not applicable during the period inspected. In total, we reviewed 181 inmate medical files, which are referred to as unit health records. In addition, we reviewed staffing level reports, medical appeals summaries, nursing policies and procedures, summaries of medical drills and emergencies, minutes from Quality Management Committee and Emergency Medical Response Review Committee hearings, contents of inmate transfer envelopes, and assorted manual logs or tracking worksheets related to medical care delivery. We also conducted a live medical emergency drill and evaluated the adequacy of the responding staff’s actions. Finally, we interviewed medical and custody staff members about the delivery of medical care to inmates, and we observed day-to-day medical delivery at the institution.

We do not test the care provided in the licensed hospitals or correctional treatment centers because they are subject to inspections and oversight by other regulatory agencies.

Consistent with our agreement with the receiver, our report only addresses the conditions found related to the medical care criteria. We do not discuss the causes of noncompliance, nor do we make specific recommendations in this report. However, if we learn of an inmate-patient who needs immediate care,

we notify the health care manager and request a status report. Moreover, if we learn of significant departures from community standards, we may report such departures to the institution's health care manager or the receiver's office. Because these matters involve confidential medical information protected by state and federal privacy laws, specific details related to these cases are not included in our report.

For ease of reference, following is a table of abbreviations used in the remainder of this report.

Abbreviations used in this report	
AED	Automatic External Defibrillator
BLS	Basic Life Support
CMO	Chief Medical Officer
CTC	Correctional Treatment Center
CTQ	Confined to Quarters
EMRRC	Emergency Medical Response Review Committee
FTF	Face-to-Face
GACH	General Acute Care Hospital
HCM	Health Care Manager
INH	Isoniazid (antituberculous medication)
LVN	Licensed Vocational Nurse
MOD	Medical Officer of the Day
OB	Obstetrician
OC	Oleoresin Capsicum (pepper spray)
OHU	Outpatient Housing Unit
OIG	Office of the Inspector General
PCP	Primary Care Provider
QMC	Quality Management Committee
RN	Registered Nurse
SOAPE	Subjective, Objective, Assessment, Plan, Education
SRN	Supervising Registered Nurse
TB	Tuberculosis
TTA	Triage and Treatment Area
UHR	Unit Health Record
UM	Utilization Management

California Prison Health Care Receivership Corporation's Response

PRISON HEALTH CARE SERVICES

June 3, 2010

David R. Shaw, Inspector General
Office of the Inspector General
P.O. Box 348780
Sacramento, CA 95834-8780

Dear Mr. Shaw,

The purpose of this letter is to inform you that the Office of the Receiver has reviewed the draft report of the Office of the Inspector General's (OIG) Medical Inspection Results (MIR) for the February 2010 inspection of Ironwood State Prison (ISP). At this time, we would like to acknowledge that ISP accepts all OIG findings that were rated 60% or less. ISP will formulate corrective action plans for each of the deficiencies noted that are not being addressed by statewide initiatives or other resources designed to achieve a constitutional level of health care.

Thank you for preparing the report. Your efforts have advanced our mutual objective of ensuring transparency and accountability in the California Prison Health Care Services operations. Should you have any questions or concerns, please contact Olga Durette, Health Program Manager II, Program Compliance Section at (916) 322-7669.

Sincerely,

A handwritten signature in black ink, appearing to read "Kathleen Webb", is written over a horizontal line.
